

3 Fixing RUT

1. Load trips using your preferred method.
2. Connect the XT(2) to your PC and start TripManager.
3. On the Trips preset your trips are shown.
4. Trips without a checkmark are 'Imported' and are subject to RUT behaviour.
5. Trips with a checkmark are fixed.
6. Individual files can be (un)checked, and will be saved to the device.

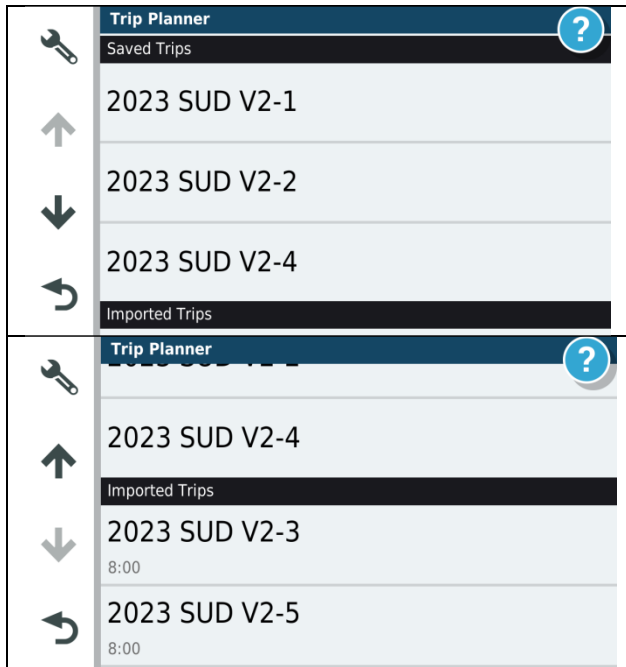

7. Or select all files, use CTRL-A, and choose 'Functions/Set selected trips to saved'.

8. You can unplug your device.

9. On the trip planner your trips should be listed under 'Saved'

Notes:

- The first time you save a file, or better make a change to the device, you will notice a delay from 5-10 seconds. Next actions are fast.
- If you use the function 'Transfer to device' and check .trip files, the trips are fixed (set to saved) by default.
