# 3 Fixing RUT

1. Load trips using your preferred method.
2. Connect the XT(2) to your PC and start TripManager.
3. On the Trips preset your trips are shown.
4. Trips without a checkmark are 'Imported' and are subject to RUT behaviour.
5. Trips with a checkmark are fixed.
6. Individual files can be (un)checked, and will be saved to the device.

7. Or select all files, use CTRL-A, and choose 'Functions/Set selected trips to saved'.

8. You can unplug your device.

9. On the trip planner your trips should be listed under 'Saved'

Notes:

-   Trip Manager pre version V1.5 had an initial delay after the first write to the device. This has been fixed in V1.5.
-   If you use the function 'Send to' and check .trip files, the trips are fixed (set to saved) by default.
